

PCA-2 Pareto: Tension vs Mass Efficiency

PCA-2 Disk Model — All (N,profile,elevation) Combinations

The PCA-2 disk model shows a clear Pareto frontier. R=3.0m dominates absolute tension. R=1.5m achieves the highest N/kg. Compare with bem-pareto-radius (BEM v2.1) to see the fidelity difference. PCA-2 overestimates forces — the BEM version is the design truth. Data: PCA-2 disk model, 384 configs.
